

Materials Design Analysis Reporting (MDAR)

Checklist for Authors

The MDAR framework establishes a minimum set of requirements in transparent reporting applicable to studies in the life sciences (see Statement of Task: [doi:10.31222/osf.io/9sm4x](https://doi.org/10.31222/osf.io/9sm4x)). The MDAR checklist is a tool for authors, editors, and others seeking to adopt the MDAR framework for transparent reporting in manuscripts and other outputs. Please refer to the MDAR Elaboration Document for additional context for the MDAR framework.

For all that apply, please note where in the manuscript the required information is provided.

Materials:

Newly created materials	indicate where provided: page no/section/legend)	n/a
The manuscript includes a dedicated "materials availability statement" providing transparent disclosure about availability of newly created materials including details on how materials can be accessed and describing any restrictions on access.		X
Antibodies	indicate where provided: page no/section/legend)	n/a
For commercial reagents, provide supplier name, catalogue number and RRID , if available.		X
DNA and RNA sequences	indicate where provided: page no/section/legend)	n/a
Short novel DNA or RNA including primers, probes: Sequences should be included or deposited in a public repository.	Whole genome sequencing data derived from genomic DNA deposited in NCBI Sequence Read Archive under BioProjects: PRJNA683923 and PRJNA675863. See Data S4 for list of other publicly available whole genome sequencing data with BioProject and BioSample accession numbers as well as the Acknowledgments: Data and materials availability.	
Cell materials	indicate where provided: page no/section/legend)	n/a
Cell lines: Provide species information, strain. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID.		X
Primary cultures: Provide species, strain, sex of origin, genetic modification status.		X
Experimental animals	indicate where provided: page no/section/legend)	n/a
Laboratory animals or Model organisms: Provide species, strain, sex, age, genetic modification status. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID.		X
Animal observed in or captured from the field: Provide species, sex, and age where possible.	Pet domestic dogs (<i>Canis lupus familiaris</i>) surveyed and sampled (saliva) by owners under IACUC protocol # A-2520-18. All saliva samples sent for sequencing have been fully used and are unavailable. Saliva swabs from dogs enrolled in the project, if available, are restricted to the research parameters of the IACUC protocol (e.g., only to undergo DNA sequencing).	
Plants and microbes	indicate where provided: page no/section/legend)	n/a
Plants: provide species and strain, ecotype and cultivar where relevant, unique accession number if available, and source (including location for collected wild specimens).		X
Microbes: provide species and strain, unique accession number if available, and source.		X
Human research participants	indicate where provided: page no/section/legend) or state if these demographics were not collected	n/a
If collected and within the bounds of privacy		X

constraints report on age, sex and gender or ethnicity for all study participants.		
--	--	--

Design:

Study protocol	indicate where provided: page no/section/legend)	n/a
If study protocol has been pre-registered, provide DOI. For clinical trials, provide the trial registration number OR cite DOI.		x

Laboratory protocol	indicate where provided: page no/section/legend)	n/a
Provide DOI OR other citation details if detailed step-by-step protocols are available.		x

Experimental study design (statistics details)		
For in vivo studies: State whether and how the following have been done	indicate where provided: page no/section/legend. If it could have been done, but was not, write not done	n/a
Sample size determination		x
Randomisation		x
Blinding		x
Inclusion/exclusion criteria		x

Sample definition and in-laboratory replication	indicate where provided: page no/section/legend	n/a
State number of times the experiment was replicated in laboratory.		x
Define whether data describe technical or biological replicates.		x

Ethics	indicate where provided: page no/section/legend	n/a
Studies involving human participants: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.		x
Studies involving experimental animals: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.		x
Studies involving specimen and field samples: State if relevant permits obtained, provide details of authority approving study; if none were required, explain why.	Approved by the Institutional Animal Care and Use Committee (IACUC) at the University of Massachusetts Chan Medical School, IACUC protocol # A-2520-18.	

Dual Use Research of Concern (DURC)	indicate where provided: page no/section/legend	n/a
If study is subject to dual use research of concern regulations, state the authority granting approval and reference number for the regulatory approval.		x

Analysis:

Attrition	indicate where provided: page no/section/legend	n/a
Describe whether exclusion criteria were preestablished. Report if sample or data points were omitted from analysis. If yes report if this was due to attrition or intentional exclusion and provide justification.	"Supplementary Text" (Text S2) contains analytical exclusion / inclusion criteria.	

Statistics	indicate where provided: page no/section/legend	n/a
Describe statistical tests used and justify choice of tests.	See "Materials and Methods". Notable non-standard employment of statistical tests is the use of "max(T) permutation approach" described in "Population Peculiarity Scoring (PPS)" and the use of both restricted maximum likelihood (REML) models and likelihood ratio tests between maximum-likelihood (ML) models in "Linear mixed-effects regression models (LMERs)". References that justify the choice of these tests are given in the respective methods.	

Data availability	indicate where provided: page no/section/legend	n/a
For newly created and reused datasets, the manuscript includes a data availability statement that provides details for access or notes restrictions on access.	All data has been deposited into publicly available archives. Data policy is completely open and has no restrictions to use or access. For DOIs and URLs, see the "Data and materials availability".	
If newly created datasets are publicly available, provide accession number in repository OR DOI OR URL and licensing details where available.	For DOIs and URLs, see the "Data and materials availability" and "References".	
If reused data is publicly available provide accession number in repository OR DOI OR URL, OR citation.	For reused data, see "References".	

Code availability	indicate where provided: page no/section/legend	n/a
For all newly generated custom computer code/software/mathematical algorithm or re-used code essential for replicating the main findings of the study, the manuscript includes a data availability statement that provides details for access or notes restrictions.	Scripts and code have been deposited into publicly available Zenodo archive (DOI: 10.5281/zenodo.5808330). See "Data and materials availability".	
If newly generated code is publicly available, provide accession number in repository, OR DOI OR URL and licensing details where available. State any restrictions on code availability or accessibility.	Scripts and code have been deposited into publicly available Zenodo archive (DOI: 10.5281/zenodo.5808330). See "Data and materials availability".	
If reused code is publicly available provide accession number in repository OR DOI OR URL, OR citation.	See "Materials and Methods" and "References".	

Reporting

MDAR framework recommends adoption of discipline-specific guidelines, established and endorsed through community initiatives. Journals have their own policy about requiring specific guidelines and recommendations to complement MDAR.

Adherence to community standards	indicate where provided: page no/section/legend	n/a
State if relevant guidelines (e.g., ICMJE, MIBBI, ARRIVE) have been followed, and whether a checklist (e.g., CONSORT, PRISMA, ARRIVE) is provided with the manuscript.	No, we did not employ a discipline-specific guideline or checklist.
